DETAILED ACTION

Allowable Subject Matter

1. Claims 1-25 are allowed.
2. The following is an examiner's statement of reasons for allowance: in regard to claims 1, 15, 18 and 24, the primary reason for allowance of the claims is the inclusion of the steps or structures for determining the extent to which an organ is centered within the ultrasound cone boundary when a cone violation is determined and providing a display indicating that re-aiming of the ultrasound transducer is necessary when there is a cone violation and the organ is not centered by a selected amount. In regard to claims 10 and 22, the primary reason for allowance of the claims is the inclusion of the steps or structures for providing a display showing a cross-section of the bladder determined from information from a single ultrasound scan plane when the transducer is initially placed on a patient's abdomen and implementing a three-dimensional ultrasound scan following termination of generation of the single ultrasound scan plane, when the cross-section of the organ on the display reaches a desired size by manipulating the position of the transducer on the patient, indicating desired aiming of the transducer. The closest reference to Barnard et al. (US 6,406,431 B1) teaches a system and method for providing successive images of a bladder during the voiding process wherein one of the step includes verification of whether adjusted plane broadside angle correlates with previous plane broadside angle, but fails to teach expressly the claimed re-aiming steps mentioned above.
